Some benefits are guaranteed, and some benefits are variable with returns based on the future performance of your insurer carrying on life insurance business. If your policy offers guaranteed benefits, then these will be clearly marked "guaranteed' in the illustration table on this page. If your policy offers variable benefits, then the illustrations on this page will show two different rates of assumed future investment returns. Currently the gross investment returns are stipulated as 4% p.a. and 8% p.a. These assumed rate of return are not guaranteed, and these are not the upper or lower limits of what you might get back, as the value of your policy is dependent on a number of factors including actual future investment performance. ##No Goods and Service Tax shall be applicable on Individual life insurance products as per prevailing laws. Tax laws are subject to amendments from time to time.

Partial Withdrawal Benefit

Subject to policy being in force (including when the policy is reduced paid up), Partial Withdrawal is allowed any time after five policy anniversaries from Regular/Single Premium fund value from the date of issuance of the policy. Under this facility, the policyholder can also opt for Systematic Withdrawal Plan (SWP), Chosen-rate Withdrawal Plan (CWP) and Index based Withdrawal Plan (IWP).

- Partial withdrawals shall be made first from the Top-Up Premium Fund which has completed the lock in period and then from Regular Premium Fund or Single Premium Fund, whichever is applicable, if Top-Up Fund is insufficient.
- For the purpose of partial withdrawals, lock in period for the Top-up premiums will be five years or any such limit prescribed by IRDAI from time to time.
- The minimum amount that can be withdrawn is ₹ 1,000/- subject to Total Fund Value (Regular + Top Up Fund) post such withdrawals not being less than an amount equivalent to two years' Annualised Regular Premiums in case of Regular/Limited Pay or 5% of Single Premium in case of Single Pay.
- Partial withdrawal is allowed only after insured attains 18 years of age.
- The partial withdrawals shall not be allowed if it would result in termination of the contract.

Create a passive income source with Smart withdrawal options:

1) Systematic Withdrawal Plan (SWP):

This partial withdrawal facility allows policyholder to withdraw from the fund at pre-determined intervals. Such withdrawals can be a pre-determined percentage of the fund value or a pre-determined absolute amount.

For example, if the policyholder chooses 6% of the fund value to be withdrawn yearly, then an amount equal to 6% of the fund value would be paid as per the specified payout frequency.

Following conditions shall apply on SWP:

- The policyholder has option to choose the percentage ranging from 1% to 15%.
- This facility can be opted at policy inception or anytime during the policy term. The policyholder may modify or opt-out of the facility by notifying the Company at least 30-days prior to the policy anniversary. Policyholder may choose to opt-in again as per the requirements on a later date.
- It is allowed only after five policy anniversaries from the date of issuance of the policy.
- The payouts can be taken monthly, quarterly, half-yearly, yearly or on specified date(s). The first payout will be made on the withdrawal start date as chosen by the policyholder.
- All conditions applicable for partial withdrawals such as minimum and maximum withdrawal amount, age, etc. will be applicable for Systematic Withdrawal Plan as well. Both SWP and partial withdrawal can be availed simultaneously provided the fund value in any given year is not less than two years' annualized premiums for Limited/ regular pay and 5% of single premium paid for single pay.

2) Chosen-rate Withdrawal Plan (CWP)

Under this partial withdrawal facility, a payout, as per the payout frequency chosen, will be processed in case the performance of the fund(s) where policyholder has invested their premium is higher than the chosen rate of return by the policyholder.

For example, if the actual fund value on the date of withdrawal is more than the fund value basis the chosen rate of return , then the positive difference between the two fund values shall

be paid out to the policyholder. If the actual fund value is less than the fund value basis the chosen rate, then no payout shall be processed.

The following conditions shall apply on CWP:

- The T&Cs applicable to SWP, shall be applicable to CWP. Both SWP and CWP can not be opted together.
- Both CWP and partial withdrawal can be availed simultaneously provided the fund value in any given year is not less than two years' Annualized premiums for Limited/ regular pay and 5% of Single premium paid for single pay

3) Index based Withdrawal Plan (IWP)

This option works similar to CWP. But instead of choosing a rate of return, the policyholder can link rate of return to an external index. If the performance of the fund(s) where policy holder has invested their premium in is higher than their index based return, then the positive difference between the two fund values shall be paid out to policy holder as per the payout frequency chosen.

The policyholder shall have an option to choose from a list of indices such as:

1) Compound Annual Growth Rate (CAGR) of benchmark fund as on date of withdrawal
2) 10-year G-Sec rate dated 1st April of each year as published by M/s. Financial Benchmarks India Pvt Ltd shall be applicable during the period of twelve months, beginning 1st May of the relevant financial year.
3) SBI's Savings A/c rate basis April 1 of the relevant year shall be applicable during the period of twelve months, beginning 1st May of the relevant financial year
4) SBI's 5-year term deposit rates basis April 1 of the relevant year shall be applicable during the period of twelve months, beginning 1st May of the relevant financial year
5) CPI Inflation rate as published by mospi.gov.in for March shall be applicable during the period of 12 months, beginning 1st May of the next financial year.

The following conditions shall apply on IWP:

- The list of indices shall be specified by the company from time to time. The policyholder shall have the flexibility to change the index by notifying the company at least 30 days prior to the policy anniversary.
- The T&Cs applicable to SWP, shall be applicable to IWP as well.
- Both IWP and partial withdrawal can be availed simultaneously provided the fund value in any given year is not less than two years' annualized premiums for Limited/ regular pay and 5% of single premium paid for single pay.

Note: Only one plan out of SWP/CWP and IWP can be chosen by the policyholder. However, partial withdrawal can be availed along with any of the above plans provided all the conditions are being met.

Equity Derivative for Hedging Purpose:

While creating a diversified portfolio helps reduce stock specific risks, however, to protect the portfolio returns from systematic risks the fund may resort to hedging through Index/Stock Futures or Index/Stock options as stipulated by IRDAI. This would help to reduce market risk and volatility for policy holders.

Illustration of Futures:

Assume a portfolio of ₹ 55lakh. If we anticipate volatility in the markets, we may hedge the portfolio with Index futures as per IRDAI guidelines. For example, we hedge the portfolio by selling Index futures of Nifty50.

Let's say the current of Nifty50 is 22000 and the lot size is 50, Hence, the value of 1 lot of Nifty50 is (22000*50) = ₹ 11,00,000.

Since we are holding a long position in the stock portfolio, we will have to take an opposite position to hedge it.

- Therefore, sell 1 lot of Nifty50 Index futures worth ₹ 11,00,000
- The remaining ₹ (55,00,000 – 11,00,000) = ₹ 44,00,000 remains unhedged.

Now say the market falls by 10% and as a result, the Index Futures also falls by 10%. Now let us assume that the value of the portfolio also falls by 10%.

Hence,

- Loss from portfolio = (10% of ₹ 55,00,000) = ₹ 5,50,000.
- Profit from the short position in Index Futures = (10% of 11,00,000) = ₹ 1,10,000.
- Hence the overall loss gets reduced to ₹ (5,50,000 – 1,10,000) = ₹ 4,40,000. This was only possible because the portfolio was carefully hedged with Index Futures before the market crash.

Similar illustration would be applicable in the case of selling stock futures.

Illustration of stock options:

Assuming a scenario wherein we are long on a particular stock "A" in the cash market. The price is ₹ 200 and we are holding 10000 shares of the same which amounts to a portfolio of ₹ 20,00,000.

Due to uncertainty in the market, we expect adverse impact on the stock price. As per IRDAI guidelines we can buy a put option of that stock in the derivatives market.

Let's understand with 3 cases:

We initially assumed that we bought the stock for ₹ 200 in the cash market.

Case 1: The stock price moves up to ₹ 220

In such a situation, we make a profit of ₹ 20 in the cash market since we had purchased the stock at a price of ₹ 200. However, we shall lose the money which we paid to buy Put options which is ₹ 5 giving us a net profit of ₹ 15.

Case 2: The stock price falls to ₹ 180

In such a scenario, we shall have a loss of ₹ 20 in the cash market and make a profit of ₹ 20 in the derivatives market. Thereby making a net loss of ₹ 5 which is the premium paid initially to buy the Put options.

Case 3: The stock price remains unchanged at ₹ 200

In the 3rd case, we shall have no gain or loss in the cash market. However, we shall lose the money paid as a premium essentially making a net loss of ₹ 5.

Similar illustration will be applicable in case of selling an Index option.

We will be abiding by the exposure limits as prescribed by IRDAI guidelines.
