If your policy offers variable benefits, then the illustrations on this page will show two different rates of assumed future investment returns. Currently the gross investment returns are stipulated as 4% p.a. and 8% p.a. Partial Withdrawal Benefit

Subject to policy being in force (including when the policy is reduced paid up), Partial Withdrawal is allowed any time after five policy anniversaries from Regular/Single Premium fund value from the date of issuance of the policy. Under this facility, you can also opt for Systematic Withdrawal Plan (SWP), Chosen-rate Withdrawal Plan (CWP)and Index-based Withdrawal Plan (IWP).

- Partial withdrawals shall be made first from the Top-Up Premium Fund which has completed the lock in period and then from Regular Premium Fund or Single Premium Fund, whichever is applicable, if Top-Up Fund is insufficient.
- For the purpose of partial withdrawals, lock in period for the Top-up premiums will be five years or any such limit prescribed by IRDAI from time to time.
- The minimum amount that can be withdrawn is ₹ 1,000/- subject to Total Fund Value (Regular + Top Up Fund) post such withdrawals not being less than an

amount equivalent to two years' Annualised Regular Premiums in case of Regular/Limited Pay or 5% of Single Premium in case of Single Pay.

- Maximum of 25% of the Fund Value can be withdrawn in each policy year.
- Partial withdrawal is allowed only after insured attains 18 years of age.
- Any number of partial withdrawals can be made in a policy year and no charges shall be levied for making the partial withdrawals.
- The partial withdrawals shall not be allowed if it would result in termination of the contract.

Systematic Withdrawal Plan

This partial withdrawal facility allows you to withdraw from the fund at pre-determined intervals. Such withdrawals can be a pre-determined percentage of the fund value or a pre-determined absolute amount.

For example, if you wish to withdraw 6% of the fund value every year, then 6% of fund value shall be paid out to you as per the specified payout frequency.

The following conditions shall apply on SWP:

- You have an option to choose the percentage ranging from 1% to 15%
- You can take the payout monthly, quarterly, half-yearly, yearly or on specified date(s). The first payout will be made on the withdrawal start date as chosen by the policyholder
- You can opt for the plan at the policy inception or anytime during the policy term. You also have an option to modify or opt-out of the facility by notifying the company at least 30-days prior to the policy anniversary. You may choose to opt-in again as per the requirements on a later date.
- It is allowed only after five policy anniversaries from the date of issuance of the policy.
- The T&Cs applicable to Partial Withdrawal, shall be applicable to Systematic Withdrawal Plan as well.
- Both SWP and partial withdrawal can be availed simultaneously provided the fund value in any given year is not less than 2 annualized premium for Limited/ regular pay and 5% of single premium paid for single pay.

Chosen-rate Withdrawal Plan (CWP)

Under this partial withdrawal facility, a payout, as per the payout frequency chosen, will be processed in case the performance of the fund(s) where you have invested your premium is higher than the rate of return chosen by you.

For example, if the actual fund value on the date of withdrawal is more than the fund value basis your chosen rate of return, then the positive difference between the two fund values shall be paid out to you. If the actual fund value is less than the fund value basis the chosen rate, then no payout shall be processed.

The following conditions shall apply on CWP:

- The chosen rate of return can be different for different funds
- The T&Cs applicable to SWP, shall be applicable to CWP. Both SWP and CWP cannot be opted together.
- Both CWP and partial withdrawal can be availed simultaneously provided the fund value in any given year is not less than 2 annualized premium for Limited/ regular pay and 5% of single premium paid for single pay

Index-based Withdrawal Plan (IWP)

This option works similar to CWP. But instead of choosing a rate of return, you can link it to an external index. If the performance of the fund(s) where you have invested your premium in is higher than the index based return, then the positive difference between the two fund values shall be paid out to you as per the payout frequency chosen

The plan gives you an option to choose from a list of indices such as

1) Compound Annual Growth Rate (CAGR) of benchmark fund as on date of withdrawal
2) 10-year G-Sec rate dated 1st April of each year as published by M/s. Financial Benchmarks India Pvt Ltd shall be applicable during the period of twelve months, beginning 1st May of the relevant financial year.
3) SBI's Savings A/c rate basis April 1 of the relevant year shall be applicable during the period of twelve months, beginning 1st May of the relevant financial year
4) SBI's 5-year term deposit rates basis April 1 of the relevant year shall be applicable during the period of twelve months, beginning 1st May of the relevant financial year
5) CPI Inflation rate as published by mospi.gov.in for March shall be applicable during the period of 12 months, beginning 1st May of the next financial year.

The following conditions shall apply on IWP:

- The list of indices shall be specified by the company from time to time.
- You shall have the flexibility to change the index by notifying the company at least 30 days prior to the policy anniversary.
- The T&Cs applicable to SWP, shall be applicable to IWP as well.
- Both IWP and partial withdrawal can be availed simultaneously provided the fund value in any given year is not less than one annualized premium for Limited/ regular pay and 5% of single premium paid for single pay.

NOTE: Only one strategy out of SWP, CWP and IWP can be chosen by the customer. Partial withdrawal can be availed along with any of the above strategies.

Equity Derivative for Hedging Purpose:

While creating a diversified portfolio helps reduce stock specific risks, however, to protect the portfolio returns from systematic risks the fund may resort to hedging through Index/Stock Futures or Index/Stock options as stipulated by IRDAI. This would help to reduce market risk and volatility for policy holders.

Illustration of Futures:

Assume a portfolio of ₹ 55lakh. If we anticipate volatility in the markets, we may hedge the portfolio with Index futures as per IRDAI guidelines. For example, we hedge the portfolio by selling Index futures of Nifty50.

Let's say the current of Nifty50 is 22000 and the lot size is 50, Hence, the value of 1 lot of Nifty50 is (22000*50) = ₹ 11,00,000.

Since we are holding a long position in the stock portfolio, we will have to take an opposite position to hedge it.

- Therefore, sell 1 lot of Nifty50 Index futures worth ₹ 11,00,000
- The remaining ₹ (55,00,000 – 11,00,000) = ₹ 44,00,000 remains unhedged.

Now say the market falls by 10% and as a result, the Index Futures also falls by 10%. Now let us assume that the value of the portfolio also falls by 10%.

Hence,

- Loss from portfolio = (10% of ₹ 55,00,000) = ₹ 5,50,000.
- Profit from the short position in Index Futures = (10% of 11,00,000) = ₹ 1,10,000.
- Hence the overall loss gets reduced to ₹ (5,50,000 – 1,10,000) = ₹ 4,40,000. This was only possible because the portfolio was carefully hedged with Index Futures before the market crash.

Similar illustration would be applicable in the case of selling stock futures.

Illustration of stock options:

Assuming a scenario wherein we are long on a particular stock "A" in the cash market. The price is ₹ 200 and we are holding 10000 shares of the same which amounts to a portfolio of ₹ 20,00,000.

Due to uncertainty in the market, we expect adverse impact on the stock price. As per IRDAI guidelines we can buy a put option of that stock in the derivatives market.

Let's understand with 3 cases:

We initially assumed that we bought the stock for ₹ 200 in the cash market.

Case 1: The stock price moves up to ₹ 220

In such a situation, we make a profit of ₹ 20 in the cash market since we had purchased the stock at a price of ₹ 200. However, we shall lose the money which we paid to buy Put options which is ₹ 5 giving us a net profit of ₹ 15.

Case 2: The stock price falls to ₹ 180

In such a scenario, we shall have a loss of ₹ 20 in the cash market and make a profit of ₹ 20 in the derivatives market. Thereby making a net loss of ₹ 5 which is the premium paid initially to buy the Put options.

Case 3: The stock price remains unchanged at ₹ 200

In the 3rd case, we shall have no gain or loss in the cash market. However, we shall lose the money paid as a premium essentially making a net loss of ₹ 5.

Similar illustration will be applicable in case of selling an Index option.

We will be abiding by the exposure limits as prescribed by

IRDAI guidelines.
